

# Manage API keys

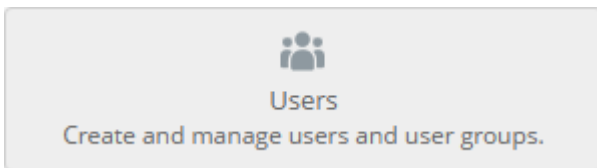

The HTTP(S) API has been available since MXSuite version 3.3.0.

To create an API key, there are 2 steps needed:

1. Create the API-user
2. Create the API-key

## Create an API user

1. Open the **Administration** module
2. Click on **Users**

3. Create a new user for the API with the correct user rights. Assure that you select user type API.

### User Details

#### General Rights

##### User Information

First name:

API user for Navision

Last name:

User name:

navision

Rank:

E-mail:

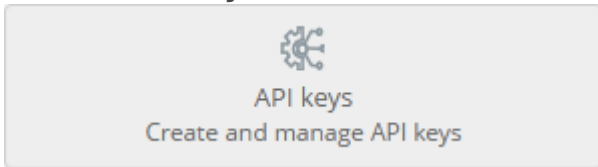

User type:

API

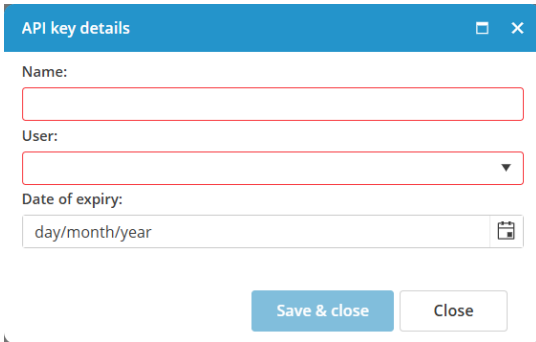

Groups

## Create the API key

1. Open the **Administration** module
2. Click on **API keys**

3. Click on **New...**

A screenshot of a 'API key details' form. The form has a blue header with the title 'API key details' and window control icons. It contains three input fields: 'Name:' (a text box), 'User:' (a dropdown menu), and 'Date of expiry:' (a date picker with a calendar icon). At the bottom, there are two buttons: 'Save & close' and 'Close'.

4. Enter the **Name** of the API so you can easily distinguish all API keys.
5. Select the related API user
6. If needed, enter an expiry date.
7. Click on **Save & close**
8. Now the API key is created and visible.
