

# Update MXSuite V3 to a newer version

To update MXSuite V3 to the latest version available please follow the below steps.

There is no need to create a backup of the database as the update does not affect the data in the database and cannot cause any loss.

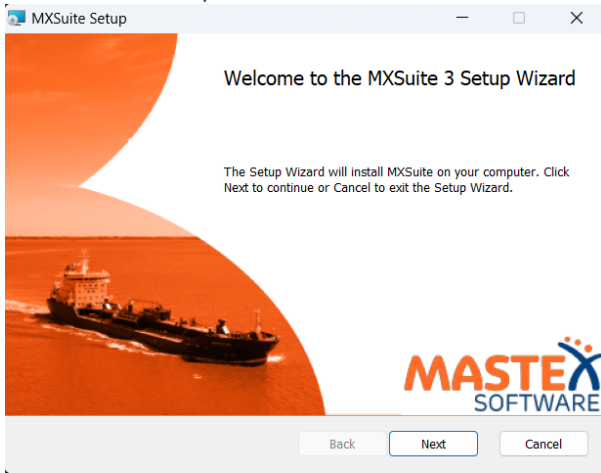

1. Check if there is a new version available for the update.
  - Go to **Summary -> About -> Check for Updates**
  - A pop-up window appears with the information (either that you are already on the latest version or about the latest version available):

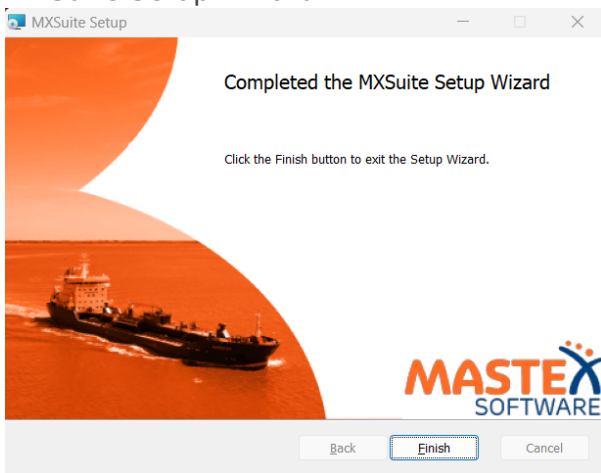

2. Download the latest version
  - Press **OK** to proceed with the download of the latest version (screenshot above).
3. Wait until the download is finished.
4. Open the downloaded file, and right click on the installation file -> **Run as administrator**

The installation file should be run as administrator to be able to update all files.

5. Follow the steps from the installation wizard (click on Next button)

6. The update is ready and installed successfully the message shows: Completed the MXSuite Setup Wizard
