

# End of life for Microsoft SQL server

Several versions of SQL Server have reached the end of their life. When MXSuite was first released in 2009, SQL Server 2008 was the standard, followed by some other versions.

The table below shows which SQL Server versions are no longer supported. Mastex Software usually follows the date Microsoft uses as the end date for mainstream support. This means that future versions of MXSuite will not work with old SQL Server versions.

SQL version	End-of-life Mainstream support
Microsoft SQL Server 2008	8 July 2014
Microsoft SQL Server 2008 R2	8 July 2014
Microsoft SQL Server 2012	11 July 2017
Microsoft SQL Server 2014	9 July 2019
Microsoft SQL Server 2016	13 July 2021
Microsoft SQL Server 2017	11 October 2022
Microsoft SQL Server 2019	7 January 2025
Microsoft SQL Server 2022	11 January 2028

Do you use an SQL Server version on board or in the office that is red in the table? Change it to the newest SQL version as fast as you can.

Do you have a version that is orange in the list? Then it is okay for now, but not for much longer and we strongly advice to upgrade.
